

Project Report 2

Yousef Alaa Awad

yousef.awad@ucf.edu

EEL3801: Computer Organization

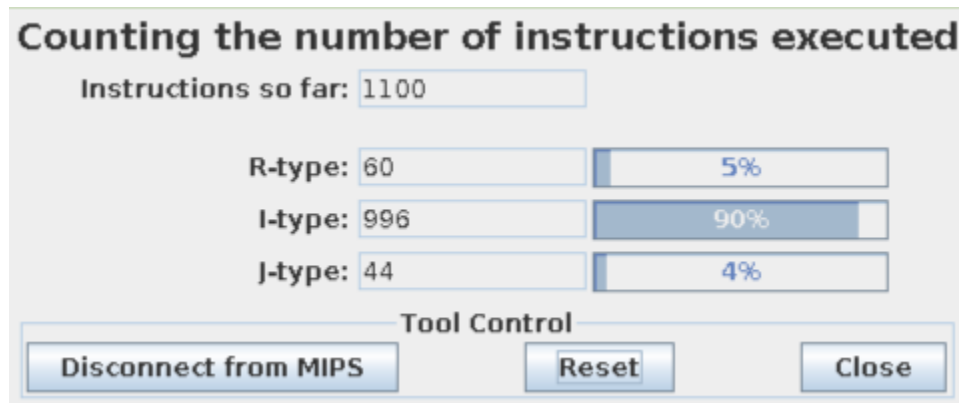

Due Date: 7th July, 2025

Submission Date: 6th July, 2025

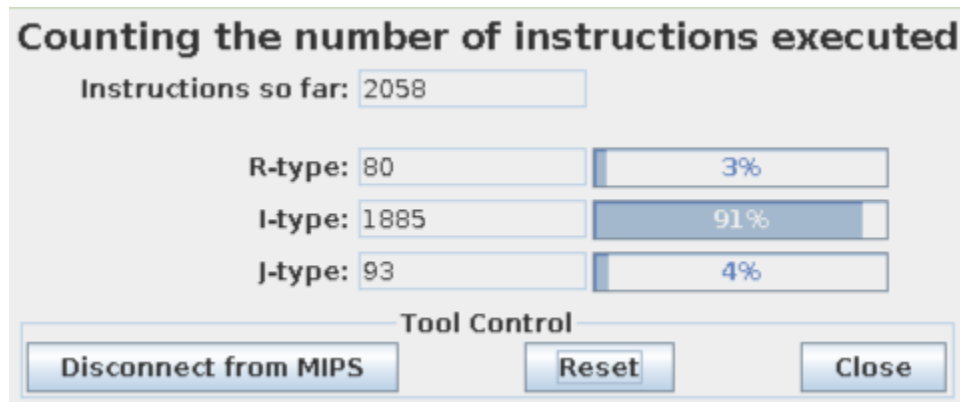

1.0 Pre-Optimization

1.1 Number of Instructions Executed

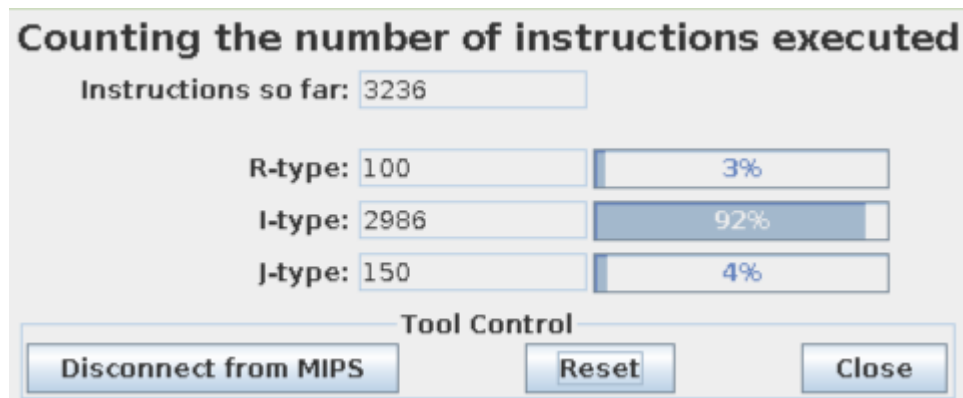

Sentence 1: DeMara finds logic beautiful.

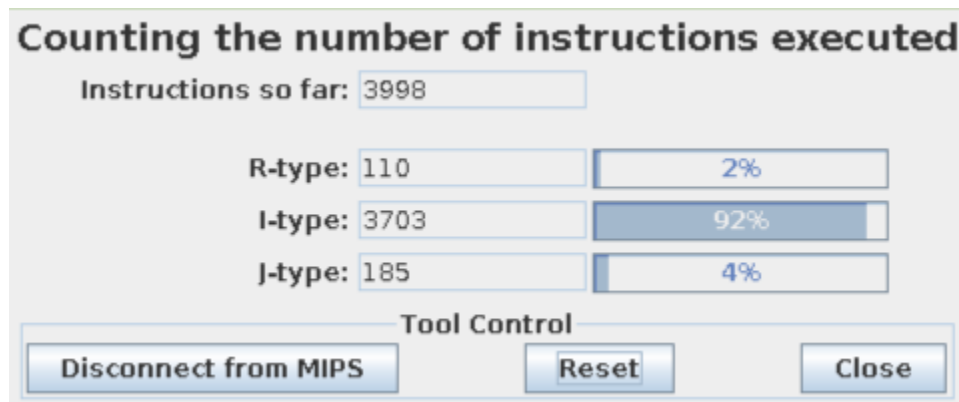

Sentence 2: He coolly sketches hypothetical CPU architectures for fun.

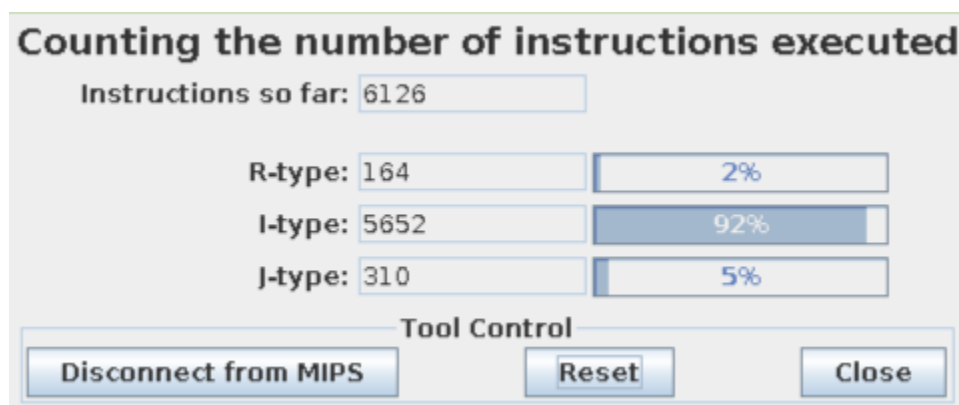

Sentence 3: While others see tangled wires, he perceives the elegant, hierarchical structure of a computer.

Sentence 4: His focus is so absolute that he once debugged a complex pipeline hazard in a simulated processor during a loud concert.

Sentence 5: This calm and quiet mastery over the fundamental principles of how a machine truly functions gives him an unshakable confidence that many people around him often mistake for simple aloofness.

Subsequent Graph:

1.2 CPI Calculations

$$\text{Sentence 1: } \frac{6 \cdot 60 + 4 \cdot 996 + 3 \cdot 44}{1100} = 4.069$$

$$\text{Sentence 2: } \frac{6 \cdot 80 + 4 \cdot 1885 + 3 \cdot 93}{2058} = 4.033$$

$$\text{Sentence 3: } \frac{6 \cdot 100 + 4 \cdot 2986 + 3 \cdot 150}{3236} = 4.015$$

$$\text{Sentence 4: } \frac{6 \cdot 110 + 4 \cdot 3703 + 3 \cdot 185}{3998} = 4.009$$

$$\text{Sentence 5: } \frac{6 \cdot 164 + 4 \cdot 5752 + 3 \cdot 310}{6126} = 4.003$$

Subsequent Graph:

1.3 Energy Consumption

Sentence 1: DeMara finds logic beautiful.

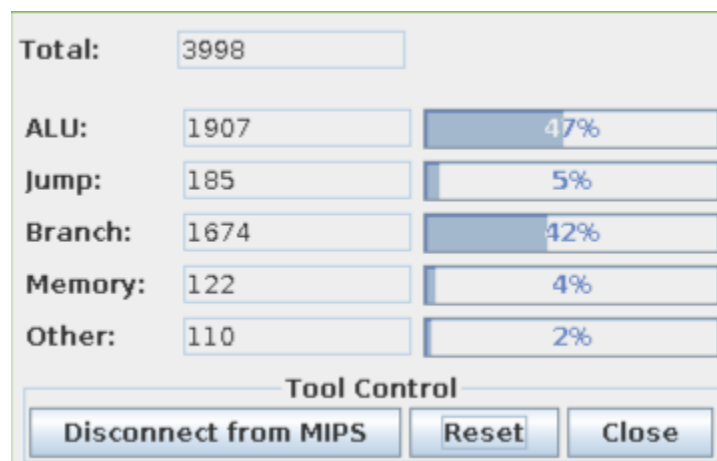

Sentence 2: He coolly sketches hypothetical CPU architectures for fun.

Sentence 3: While others see tangled wires, he perceives the elegant, hierarchical structure of a computer.

Sentence 4: His focus is so absolute that he once debugged a complex pipeline hazard in a simulated processor during a loud concert.

Sentence 5: This calm and quiet mastery over the fundamental principles of how a machine truly functions gives him an unshakable confidence that many people around him often mistake for simple aloofness.

Subsequent Calculations:

Sentence 1: $6*549+3*44+7*416+110*31+9*60=10,288 fJ$

Sentence 2: $6*999+3*93+7*826+110*60+9*80=19,375 fJ$

Sentence 3: $6*1551+3*150+7*1338+110*97+9*100=30,692 fJ$

Sentence 4: $6*1907+3*185+7*1674+110*122+9*110=38,125 fJ$

Sentence 5: $6*2900+3*310+7*2559+110*193+9*164=58,949 fJ$

Subsequent Graph:

1.4 MIPS/mW

Required Calculations:

$exectution\ time = clocks * clock\ cycle$

$$MIPS = \frac{\frac{instructions}{1,000,000}}{execution\ time}$$

$$mW = \frac{1000 * energy * 10^{-15}}{execution\ time}$$

Will not be done in parts, only end result will be shown, assume units are MIPS/mW:

Sentence 1: 106,920.68

Sentence 2: 106,219.35

Sentence 3: 105,434.64

Sentence 4: 104,865.57

Sentence 5: 103,920.33

2.0 Post-Optimization

2.1 Energy Consumption

Sentence 1: DeMara finds logic beautiful.

Sentence 2: He coolly sketches hypothetical CPU architectures for fun.

Sentence 3: While others see tangled wires, he perceives the elegant, hierarchical structure of a computer.

Sentence 4: His focus is so absolute that he once debugged a complex pipeline hazard in a simulated processor during a loud concert.

Sentence 5: This calm and quiet mastery over the fundamental principles of how a machine truly functions gives him an unshakable confidence that many people around him often mistake for simple aloofness.

Subsequent Calculations:

Sentence 1: $6 \times 426 + 3 \times 37 + 7 \times 289 + 110 \times 31 + 9 \times 91 = 8,919 \text{ fJ}$

Sentence 2: $6 \times 713 + 3 \times 76 + 7 \times 534 + 110 \times 60 + 9 \times 136 = 16,068 \text{ fJ}$

Sentence 3: $6 \times 1085 + 3 \times 123 + 7 \times 869 + 110 \times 97 + 9 \times 185 = 25,297 \text{ fJ}$

Sentence 4: $6 \times 1346 + 3 \times 153 + 7 \times 1110 + 110 \times 122 + 9 \times 215 = 31,660 \text{ fJ}$

Sentence 5: $6 \times 2082 + 3 \times 251 + 7 \times 1738 + 110 \times 193 + 9 \times 331 = 49,620 \text{ fJ}$

Subsequent Graph:

2.2 MIPS/mW

Required Calculations:

*exectution time = clocks * clock cycle*

$$MIPS = \frac{\frac{\text{instructions}}{1,000,000}}{\text{execution time}}$$

$$mW = \frac{1000 * \text{energy} * 10^{-15}}{\text{execution time}}$$

Will not be done in parts, only end result will be shown, assume units are MIPS/mW:

Sentence 1: 123,332.21
Sentence 2: 128,080.66
Sentence 3: 127,920.31
Sentence 4: 126,279.22
Sentence 5: 123,458.28

3.0 Data Cache Stuff

3.1 Pictures

Part B:

Default

Simulate and illustrate data cache performance

Cache Organization

Placement Policy Fully Associative Number of blocks 1

Block Replacement Policy LRU Cache block size (words) 1

Set size (blocks) 1 Cache size (bytes) 4

Cache Performance

Memory Access Count 635 Cache Block Table {block 0 at top}

Cache Hit Count 463 ☐ = empty

Cache Miss Count 172 ☒ = hit

Cache Hit Rate 73% ☐ = miss

Runtime Log

☐ Enabled

Tool Control

Disconnect from MIPS Reset Close

Middle

Simulate and illustrate data cache performance

Cache Organization

Placement Policy	Direct Mapping	Number of blocks	2
Block Replacement Policy	LRU	Cache block size (words)	2
Set size (blocks)	1	Cache size (bytes)	16

Cache Performance

Memory Access Count	635	Cache Block Table (block 0 at top) <input type="checkbox"/> = empty <input checked="" type="checkbox"/> = hit <input type="checkbox"/> = miss
Cache Hit Count	545	
Cache Miss Count	90	
Cache Hit Rate	86%

3.2 Explanation

The reason for the massive jump between cache hit rate is due to the fact that the increase in memory blocks and word size per block means that it can access more data at once, specifically with the characters in the inputted string.
